[El Nino is predicted to return in 2023, and experts warn of record-br](#)

21 July 2023

El Nino is a weather phenomenon characterised by the warming of the Pacific Ocean near the equator, which has significant impacts on weather patterns around the world, leading to increased precipitation in some areas and drought in others. The National Oceanic and Atmospheric Administration (NOAA) has predicted that a weak El Nino event is likely to develop in late 2023, but it is difficult to say for certain what the exact impacts of this event will be or whether it will lead to record-breaking temperatures.
