23 October 2023

PEKAN, 18 August 2023 – Cupping therapy is a form of alternative medicine that is widely practiced in many Asian countries, but it is less common in European communities.

This therapy is still practiced today by using various alternatives such as manual suction or using a pump to create suction on the skin. It is often used on the back, shoulders, and arms, but it can also be used on other areas without the need to shave.

However, this method is not very user-friendly and has the potential to cause skin blisters and bruising. It is important to be cautious and to seek professional advice before trying cupping therapy. The cups used in cupping therapy are designed to stick to the skin.

### Harnessing Real-World Projects: A Strategic Proposal for Industry Engagement Malaysia's Technical Universities

21 September 2023

As the financial landscape of higher education evolves globally, innovative solutions are required. One such approach involves the transformation of classrooms in Malaysia's technical universities into real-world laboratories where academic staff mentor students to develop real-world solutions for projects provided by industry partners. This approach aligns with national policy goals and serves a dual purpose: acting as an income source and providing practical experience for students.
